

5 steps to building a stronger resilience plan

Building an IT resilience plan can be daunting. But with these 5 steps, you'll be well on your way to doing just that. Keeping your business safe and ready for anything.

1

Know your biggest assets

Identify your most business-critical systems and processes – the ones to protect at all costs.

Prioritise them. Allocate extra time to risk planning and response.

2

Audit your hardware

Make sure you have updated firewalls and security measures on all devices.

Find a partner to help you keep your tech resilient and up to date.

3

Plan, plan, plan

Get ahead of potential threats, and make sure you're ready for anything. Hold weekly, monthly, and quarterly meetings. Think about how your partners might respond, too.

Conduct regular tabletop exercises to re-create real-life scenarios. And develop an early warning system to spot any problems.

4

Collaborate on disaster recovery

Work closely with your leadership team on wider strategy.

Implement back-up systems and contingency plans for key business processes.

5

Retain talent and practise

Even the best IT resilience plans can fail without the right people.

Make every effort to keep hold of key employees.
